

Three ways of email enhances healthcare

- **Clinical delivery:** Email enables faster, better communication. *How do you keep it safe?*
- **Transaction management:** Email cuts transaction cost and improves efficiency. *How do you keep it productive?*
- **Infrastructure support:** Email improves healthcare operations on every level. *How do you make it work for every individual and group in your organization?*

Modern healthcare needs email. It enables better patient care and outcomes. It accelerates the pace of transactions and communications. It enhances every element of established business operations and systems.

Understanding the role of email in healthcare

Healthcare has been transformed by technology in the form of email. And in every place that email has made positive change, its effectiveness and security remain essential to its continued success.

- **Clinical delivery:** The changes to patient care made possible by technology are among the most visible and most reported. In this area, email plays a critical role in helping providers across multiple facilities communicate faster and more accurately with each other and their patients.
- **Transaction management:** Healthcare organizations now use email to process millions of transactions a day—at a fraction of traditional, hard-copy costs and in a fraction of the time. With email, healthcare organizations not only do business more efficiently and cost-effectively, but also more responsively.
- **Infrastructure support:** No modern industry is complete without email and healthcare is no exception. Email has become a mission-critical component for every individual and group in the organization—from those on the front lines of patient care to those who oversee the daily management of business operations.

Why MailFrontier

MailFrontier is an email security company trusted by organizations of every size in every industry to protect their email from spam, virus, phishing, fraud and the growing number of other costly email threats. MailFrontier provides the only email security solution that promises to be:

- **Effective:** MailFrontier stops 98 percent of unwanted email at network perimeter
- **Easy:** MailFrontier requires just 10 minutes a week to manage
- **A Step Ahead:** MailFrontier continues to evolve its technology and its techniques to stop new threats as they emerge

Why MailFrontier makes sense for healthcare

- **All-in one-protection from spam, virus, phishing, and fraud**
- **One-click management of individual, group, or corporate setting**
- **Predictive technology that anticipates and blocks emerging threat forms**

Unprotected email can hurt healthcare

Spam, virus, phishing, fraud. If left unguarded, email can also interfere—with devastating effect—with healthcare's primary mission: providing effective, high-quality care.

Every form of email threat has the potential to devastate networks, frustrate users, and compromise delivery of care. Additionally, IT managers of healthcare organizations face additional challenges when fighting email threats:

- **Managing the multiple provider and patient groups** that increase as their organizations acquire more network providers and members.
- **Maintaining the performance of remote, diverse email server configurations from** an office sometimes hundreds of miles away.
- **Keeping the entire organization and its email safe, up, and running** to deliver patient care whenever and wherever it is needed.

MailFrontier: The prescription for healthy email

MailFrontier provides healthcare organizations with comprehensive inbound email protection that blocks spam, virus, phishing, and fraud. With these threats stopped at the network gateway, healthcare organizations can prevent network service interruption and see extended processing power and life out of their existing system configurations.

MailFrontier delivers healthcare organizations three key immediate benefits:

- **Reduced management time and cost**
We'll end the hours you spend dealing with keyword lists and content filters. We'll stop the phone calls from frustrated users looking for "lost" emails. MailFrontier knows the way to satisfy every one of your network users, groups, and administrators with one email security solution. And in five steps and a handful of mouse clicks, you can too.
- **98 percent effectiveness**
The MailFrontier Anti-Spam, Anti-Virus, and Anti-Fraud modules combine to offer a r integrated, real-time, multi-technique approach to email security. If you're at the mercy of a series of point solutions solution that seem to have an arbitrary concept of "good enough", MailFrontier offers one solution that works against every threat, on every email, every time.
- **Improved return on investment**
As your organization acquires more provider groups and customers, email volume increases as well. By keeping unwanted email out of your network altogether, you stop wasting valuable processing power on email that threatens your productivity and security. The result is longer life and use of your current IT investment—without significant additional cost.
